- ◆ 80 kVA - 160 kVA Self-Contained Mobile UPS, Custom Modified for Client
- ◆ Summer 2017
- ◆ Large UPS Equipment Rental, Set Up Outside of Building to Save Indoor Space

Global Power Supply Rents State-of-the-Art 80-160 kVA UPS Trailer at Peroxychem Facility

Summer 2017 - Global Power Supply (GPS) was commissioned by Peroxychem to provide a customized long-term UPS rental solution. Specifically chosen for the project was an 80-160 kVA self-contained mobile UPS trailer, which was modified to meet the required specifications.

PeroxyChem is a global leader in peroxygen and adjacent chemistries. The company employs approximately 550 people throughout the world, with facilities in North America, Europe and Asia.

"We couldn't be happier with the expertise and professionalism of GPS."

Project Manager

With an unyielding commitment to safety at its core and backed by an exceptional team, the company prides itself on exemplary customer service, product quality, reliability and technical service.

Global Power Supply (GPS) was specifically chosen for this project because of its ability to provide self contained mobile UPS systems, with cooling systems, UPS, battery cabinets and controls all aboard an enclosed trailer, and available for rent nationwide.

GPS' mobile UPS systems have the advantage of being able to set up and operate from outside a building, so no inside space is required when upgrading or swapping out equipment. For this specific project, GPS deployed a UPS trailer which is software

adjustable from 80 kVA to 160 kVA. The breakers had to be modified to the client's specifications, which was done in-house at GPS. After the breakers were modified, the UPS trailer was deployed to New York and a Global Power Supply qualified technician was there to provide seamless set up of the equipment, which would then provide uninterrupted power to sensitive electrical and manufacturing equipment for nearly a year.

Through remote monitoring, GPS maintained a constant watch on the UPS equipment and the entire project was completed successfully.

GPS offers nationwide UPS rentals and sales from 3 kVA to 2400 kVA, and has the expertise to help with your next critical power project.
